Setting Up LAMP On UBUNTU

By: Jared Fowler

February 21, 2015

Install LAMP:

1. sudo su
2. apt-get install apache2
3. apt-get install mysql-server mysql-client
4. apt-get install php5 php5-mysql
5. apt-get install phpmyadmin
6. ln -s /etc/phpmyadmin/apache.conf /etc/apache2/conf-available/phpmyadmin.conf
7. a2enconf phpmyadmin
8. /etc/init.d/apache2 reload

Connect Via IP:

1. Ifconfig | grep addr
2. In VirtualBox, change network setting to "Host-Only" adapter
3. In browser: <ip>/phpmyadmin

MySQL:

1. Mysql –u <username> -p
2. CREATE DATABASE <databaseName>
3. Etc.
